

# Client Facing Report

---

Prepared for

**Diversified Global Graphics**

June 2017

## **Attestation**

In May 2017, OccamSec (Osec) was hired by Diversified Global Graphics Group (DG3) to perform security testing in order to assess the security posture of the DG3 environment.

The assessment consisted of testing the internal and external infrastructure (including external footprint and DG3 web applications) internal infrastructure, wireless network and a physical security walk-around of the Burma Road facility.

After Osec's testing it was determined that there is a low probability that a targeted attack against DG3 would be successful assuming the current security posture is maintained.
